

Mold a Dolphin!

1

You'll need:

- 1 small black orb
- 1 small white orb
- 2 medium gray orbs
- 1 medium white orb (optional)
- 1 medium blue orb (optional)

TIP: Color your model magic with markers to make different colors.

2

Form a dolphin body out of one medium gray orb. Make sure to pinch the ends of the tail to make them taper.

Use the second gray orb to form the other body parts.

3A

Take a pinch and roll it into a worm. Put this on the face to be a snout.

3B

Make triangles that will be fins.

TIP: After you attach the top fin, pull it back towards the tail a bit.

4

Make eyes from the small black and white orbs.

More steps on page 2

OPTIONAL: Wave Base

5

Use half of the blue orb to form a flat, puddle-shaped base. This will be the ocean.

6

Take most of the remaining blue and most of the medium white orb. Marble them together by twisting them like a candy cane, then rolling them out. Separate into different length worms.

7

Lay these worms out on your puddle base, curling them at different points so nothing lines up. This makes the waves on the ocean!

8

Finally, marble the last of your blue and white and make little bubbles on the outside edge of your waves.

TIP: For the bubbles, mix the blue and white more when you're marbling them.
